

MIGUEL BRICEÑO GONCALVES

Backend Java Developer | Spring Boot | Microservices | REST APIs

Madrid, Spain | miguelbricenocode@gmail.com | LinkedIn: linkedin.com/in/bricenodev | Portfolio: bricenocode.netlify.app

PROFESSIONAL PROFILE

Backend developer specialized in Java and Spring Boot, with experience in microservices and REST services in corporate environments. I have contributed to building scalable solutions with Spring Boot, applying SOLID principles and Clean Code practices to improve maintainability, quality, and efficiency.

Experience with persistence using JPA/Hibernate, asynchronous messaging with RabbitMQ, and Docker deployments in Linux environments. I have also implemented JWT-based security integrated with Azure AD and worked on distributed architectures connected to legacy systems.

TECHNICAL SKILLS

Java 8/17 and the Spring ecosystem: Spring Boot, MVC, Data JPA, and Security for microservices and REST APIs. Distributed and hexagonal architectures, SOLID principles, PostgreSQL, Oracle, and MongoDB. RabbitMQ and Apache Kafka, Docker, Linux, and WebLogic. Git, Maven, GitHub, and GitLab. Backend testing with JUnit, Mockito, DBUnit, and JaCoCo. Automation with PowerShell and Python. Ongoing AWS training.

PROFESSIONAL EXPERIENCE

Backend Developer – Nter Tech Services | Madrid (Hybrid) | Jan 2025 – Present

Contributed to corporate backend solutions built on distributed architectures focused on scalability, performance, and high availability.

Developed microservices with Java 8/17 and Spring Boot to manage business entities and optimize internal processes through scalable REST APIs.

Handled persistence with Spring Data JPA and Hibernate on Oracle, working with native SQL, pagination, and data access optimization in high-volume systems.

Implemented asynchronous messaging with RabbitMQ and Spring AMQP for decoupled processing and queue management, along with batch processes using Spring Scheduling.

Integrated corporate MDM systems through EJB clients in WebLogic and contributed to distributed architectures connected to legacy systems. Implemented JWT-based security validated against Azure AD (JWKS).

Configured monitoring with Spring Boot Actuator and backend testing with JUnit, Mockito, and DBUnit, ensuring quality and code coverage with JaCoCo.

Contributed to the full development lifecycle with Maven, Docker, and Linux deployments, as well as automation scripts using PowerShell and Python.

Full Stack Developer – Bricenocode | Madrid | Jun 2024 – Jan 2025

Developed personal full stack projects with backend services in Spring Boot and Node.js, and designed REST APIs documented with Swagger/OpenAPI.

Implemented JWT-based authentication, data management with PostgreSQL, and deployments with Docker. Built frontend applications with React, TypeScript, and Tailwind CSS, applying solid practices for structure, validation, and state management.

KEY PROJECTS

Developed a microservices-based system with Spring Boot, structured as independent services communicating through REST APIs. Implemented persistence with JPA/Hibernate and SQL, asynchronous messaging with RabbitMQ, and full containerization with Docker.

Project designed to simulate real microservices environments, applying best practices in design, decoupling, and scalability.

EDUCATION

Training in Web Application Development (DAW), with a specialization in full stack development using Java, Spring Boot, and React, reinforced through continuous learning in microservices and distributed architectures.

Currently preparing for the AWS Certified Developer - Associate certification, expanding knowledge in cloud development and scalable application deployment.
